10" HEAVY DUTY POWER SWEEP KITS

Utilizes 9 3/8" O.D. x 1/4" sweep flight on 2-7/8" tube. 9" O.D. x 1/4" unload flight on 2-3/8" tube. Larger step drive gearbox with No. 60 R.C. Drive. Square stub at center well for attachment to unload auger. Each kit includes unloading tube, unloading flight, center well, intermediate wells, rack & pinion controlled well gates, control pipes for well gates, sweep flight with back shields, sweep carrier (48' & larger bins), and reduction drive sweep end wheel.

COMMERCIAL POWER SWEEPS (INCLUDES NEW SWEEP END-WHEEL)

Commercial Power Sweeps may be adapted to grain pump loops, auger unloaders, u-trough, en masse, drag conveyors or other special applications. The standard sweep unit drive is separate from the rest of the unit and is 90° to the unloader. When grain will no longer unload through the center and intermediate wells, the separate Power Sweep drive motor is started and operates on a 1" solid drive shaft with 1" bearings in a 6" tube. The sweep and back shield are supplied in sections. Center portion of sweep to be used prior to adding subsequent sections until the entire sweep has been assembled and the bin unloaded. Commercial Power Sweeps should not be installed in concrete unless troughs or tunnels are used for the drive and the unloading components. One Sweep carrier assembly is standard with all units of 48' and larger.

Each Commercial Power Sweep consists of a center well, intermediate wells, sweep, sweep drive, well gate controls and reduction sweep wheel. Specify one of the following unload systems: tube type, u-trough or mass-ter mover. *Auger unloaders require a tube cap.
